

## **XI. Taxation**

1. It is important that enterprises contribute to the public finances of host countries by making timely payment of their tax liabilities. In particular, enterprises should comply with both the letter and spirit of the tax laws and regulations of the countries in which they operate. Complying with the spirit of the law means discerning and following the intention of the legislature. It does not require an enterprise to make payment in excess of the amount legally required pursuant to such an interpretation. Tax compliance includes such measures as providing to the relevant authorities timely information that is relevant or required by law for purposes of the correct determination of taxes to be assessed in connection with their operations and conforming transfer pricing practices to the arm's length principle.
2. Enterprises should treat tax governance and tax compliance as important elements of their oversight and broader risk management systems. In particular, corporate boards should adopt tax risk management strategies to ensure that the financial, regulatory and reputational risks associated with taxation are fully identified and evaluated.

### **Commentary on Taxation**

100. Corporate citizenship in the area of taxation implies that enterprises should comply with both the letter and the spirit of the tax laws and regulations in all countries in which they operate, co-operate with authorities and make information that is relevant or required by law available to them. An enterprise complies with the spirit of the tax laws and regulations if it takes reasonable steps to determine the intention of the legislature and interprets those tax rules consistent with that intention in light of the statutory language and relevant, contemporaneous legislative history. Transactions should not be structured in a way that will have tax results that are inconsistent with the underlying economic consequences of the transaction unless there exists specific legislation designed to give that result. In this case, the enterprise should reasonably believe that the transaction is structured in

a way that gives a tax result for the enterprise which is not contrary to the intentions of the legislature.

101. Tax compliance also entails co-operation with tax authorities and provision of the information they require to ensure an effective and equitable application of the tax laws. Such co-operation should include responding in a timely and complete manner to requests for information made by a competent authority pursuant to the provisions of a tax treaty or exchange of information agreement. However, this commitment to provide information is not without limitation. In particular, the *Guidelines* make a link between the information that should be provided and its relevance to the enforcement of applicable tax laws. This recognises the need to balance the burden on business in complying with applicable tax laws and the need for tax authorities to have the complete, timely and accurate information to enable them to enforce their tax laws.
102. Enterprises' commitments to co-operation, transparency and tax compliance should be reflected in risk management systems, structures and policies. In the case of enterprises having a corporate legal form, corporate boards are in a position to oversee tax risk in a number of ways. For example, corporate boards should proactively develop appropriate tax policy principles, as well as establish internal tax control systems so that the actions of management are consistent with the views of the board with regard to tax risk. The board should be informed about all potentially material tax risks and responsibility should be assigned for performing internal tax control functions and reporting to the board. A comprehensive risk management strategy that includes tax will allow the enterprise to not only act as a good corporate citizen but also to effectively manage tax risk, which can serve to avoid major financial, regulatory and reputation risk for an enterprise.
103. A member of a multinational enterprise group in one country may have extensive economic relationships with members of the same multinational enterprise group in other countries. Such relationships may affect the tax liability of each of the parties. Accordingly, tax authorities may need information from outside their jurisdiction in order to be able to evaluate those relationships and determine the tax liability of the member of the MNE group in their jurisdiction. Again, the information to be provided is limited to that which is relevant to or required by law for the proposed evaluation of those economic relationships for the purpose of determining the correct tax liability of the member of the MNE group. MNEs should co-operate in providing that information.

104. Transfer pricing is a particularly important issue for corporate citizenship and taxation. The dramatic increase in global trade and cross-border direct investment (and the important role played in such trade and investment by multinational enterprises) means that transfer pricing is a significant determinant of the tax liabilities of members of a multinational enterprise group because it materially influences the division of the tax base between countries in which the multinational enterprise operates. The arm's length principle which is included in both the OECD Model Tax Convention and the UN Model Double Taxation Convention between Developed and Developing Countries, is the internationally accepted standard for adjusting the profits between associated enterprises. Application of the arm's length principle avoids inappropriate shifting of profits or losses and minimises risks of double taxation. Its proper application requires multinational enterprises to co-operate with tax authorities and to furnish all information that is relevant or required by law regarding the selection of the transfer pricing method adopted for the international transactions undertaken by them and their related party. It is recognised that determining whether transfer pricing adequately reflects the arm's length standard (or principle) is often difficult both for multinational enterprises and for tax administrations and that its application is not an exact science.
105. The Committee on Fiscal Affairs of the OECD undertakes ongoing work to develop recommendations for ensuring that transfer pricing reflects the arm's length principle. Its work resulted in the publication in 1995 of the *OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations (OECD Transfer Pricing Guidelines)* which was the subject of the Recommendation of the OECD Council on the Determination of Transfer Pricing between Associated Enterprises (members of an MNE group would normally fall within the definition of Associated Enterprises). The *OECD Transfer Pricing Guidelines* and that Council Recommendation are updated on an ongoing basis to reflect changes in the global economy and experiences of tax administrations and taxpayers dealing with transfer pricing. The arm's length principle as it applies to the attribution of profits of permanent establishments for the purposes of the determination of a host State's taxing rights under a tax treaty was the subject of an OECD Council Recommendation adopted in 2008.
106. The *OECD Transfer Pricing Guidelines* focus on the application of the arm's length principle to evaluate the transfer pricing of associated enterprises. The *OECD Transfer Pricing Guidelines* aim to help tax administrations (of both OECD member countries and non-member countries) and multinational enterprises by indicating mutually

satisfactory solutions to transfer pricing cases, thereby minimising conflict among tax administrations and between tax administrations and multinational enterprises and avoiding costly litigation. Multinational enterprises are encouraged to follow the guidance in the *OECD Transfer Pricing Guidelines*, as amended and supplemented<sup>7</sup>, in order to ensure that their transfer prices reflect the arm's length principle.

- 
7. One non-OECD adhering country, Brazil, does not apply the *OECD Transfer Pricing Guidelines* in its jurisdiction and accordingly the use of the guidance in those *Guidelines* by multinational enterprises for purposes of determining taxable income from their operations in this country does not apply in the light of the tax obligations set out in the legislation of this country. One other non-OECD adhering country, Argentina, points out that the *OECD Transfer Pricing Guidelines* are not compulsory in its jurisdiction.
